SUMMARY

Detail oriented Software Engineer who specializes in scaling React applications, reducing UI/API bottlenecks, and shipping performance critical features in production systems. Proven experience improving load times, reducing re-renders, and stabilizing data heavy interfaces across enterprise and startup environments.

WORK EXPERIENCE

KGS TECHNOLOGY, WA | *Software Engineer*

Jul 25 - Present

- Added server-side pagination to reports, reducing data call size & improving front-end client load times by 60%
- Facilitated density spacing, allowing users to choose grid styling & storing choices via GraphQL, reducing 75% of UI re-renders
- Refactored advanced sorting logic code across 16 major UI components into a single file, increasing maintainability
- Deployed over 1000 report versions via AWS CloudFormation, enabling faster iteration, testing and rollback of new features

REBECCA EVERLENE TRUST COMPANY, CHICAGO, IL | *Software Engineer*

Sep 24 - Jul 25

- Built modular React components with Redux Toolkit and React Query, reducing UI duplication and speeding feature delivery by 30%
- Improved real-time data responsiveness by 25% using async API pipelines and React Query caching to eliminate redundant calls
- Refactored WordPress PHP/JS templates and added caching, cutting mobile load times by 27%
- Developed integration tests and deployed updates via CI/CD, reducing regression defects by 15%

SDI PRESENCE, CHICAGO, IL | *Software Engineering Intern*

Feb 23 - Aug 23

- Built high-volume Node.js/Express APIs on PostgreSQL, reducing API failures by 28% for search, filters, and tasks
- Cut average API response times by 22% under concurrent access by adding Redis caching, query indexing, and request batching
- Reduced server load and production issues by 20% via pagination, caching, and shared Express middleware

ACCENTURE SOL. PVT. LTD., PUNE, INDIA | *Software Engineering*

Feb 21 - Aug 22

- Optimized SQL/T-SQL reporting pipelines and Python pre-aggregation jobs, improving data processing throughput by 15%
- Designed an SLA-driven incident triage system with state bucketing and priority scoring, reducing incident resolution time by 18%
- Improved frontend performance by refactoring API call patterns and async state rendering, reducing data fetches and UI re-renders
- Accelerated feature delivery by 14% by aligning frontend state models with paginated backend APIs and enum-driven contracts across sprints

PROJECTS

NUTRISAGE

- Developed an AI-powered nutrition assistant combining RAG & Fine-tuning architectures for dietary guidance from 7+ sources
- Implemented document chunking for efficient data processing; authored scripts to generate vector embeddings using FAISS
- Built an interface for real-time query processing using LangChain; wrote scripts checking 5+ metrics, improving response quality

FRESH HARVEST

- Built an e-commerce system using React (Material UI, Bootstrap) and Node.js with role-based admin and customer access
- Implemented OTP-based authentication and PayPal payments with protected REST APIs and persisted order transactions
- Designed MongoDB-backed REST APIs and hosted services on Heroku, reducing page load time by 40% after server-side pagination

COLLABORATIVE DOCUMENT EDITOR

- Built a collaborative document editor using React, Next.js, Quill, and Firebase with rich-text editing and persistent storage
- Enabled real-time multi-user collaboration via socket-based document synchronization with instant updates
- Implemented secure authentication and sharing using Firebase Auth and unique URLs for controlled access

SKILLS

Programming Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS

Frameworks & Libraries: React.js, Next.js, Redux Toolkit, React Query, Node.js, Express.js, Material UI, Bootstrap, Quill

Tools & Platforms: AWS, CloudFormation, Firebase, MongoDB, PostgreSQL, Redis, GitHub, CI/CD, Heroku, Postman

EDUCATION

Northeastern University *Master of Science in Information Systems*

Sep 2022 - May 2024

Pune University *Bachelor of Engineering*

Aug 2016 - Apr 2020
